

# DESK RESEARCH ON REVERSE MENTORING PRACTICES

PRESENTED BY THE WAY

# Content of the activity

This activity involves conducting a comprehensive desk research at the European Union level, in the partner countries of the project, to identify and analyze best practices in the application of reverse mentoring methodology within the workspace.

### Data collection

Collection of data, reports, and relevant case studies on reverse mentoring and its application in their respective countries and local contexts.

These sources may include government publications, VET providers reports, university papers, educational institutions, industry associations, and research organizations.

### Analysis

To identify successful examples of reverse mentoring programs in different sectors and industries, with a specific focus on craft enterprises. The focus will be on practices that have proven effective in enhancing skills, fostering intergenerational collaboration, driving innovation and digital transition.

# Expected results of the activity

Best Practices Report

MENT Toolkit

### Best Practices Report

This document will summarize the best practices identified, key insights, and significant case studies to correctly apply the reverse mentoring strategy in craft enterprises.

### MENT toolkit

Recommendations and insights will be generated in the form of Guidelines tool. This documentation will serve for project partners in order to implement the A3 (workshop on reverse mentoring), and it will be shared with the stakeholders involved in the project.
